TITAB

Over-View

Integracom in conjunction with **TITAB** offer a range of Resource Material for Telecommunications and Security training that is recognised as a leading edge resource used by Training Organisations nationally including TAFE.

The course material is based on Australian Standards but incorporates input from Industry professionals including manufacturers, Installers, consultants and other Training Organisations.

Our manuals are “Living Documents” and are regularly upgraded as standards and installation practices change. This ensures that all resource material is current.

For each type of Training Course there is an instructors pack available which includes

- (1) Full Power Point Presentations
- (2) Answers to all Workbook Questions
- (3) Sample Exam Papers

Our flexibility in distributing our resource material ensures that orders are dispatched within 5 working days of placing that order.

The manuals now form part of the TITAB list of approved resource material for Telecommunications Training

Integracom offers a full back up Technical Service to instructors nationally.

This will soon, also include an “Instructor Only” reference section on the website that will be updated regularly with changing standards, industry photos, white Papers and reference material.

Student manuals are comprehensive and include all the material required by the student to complete the course.

As Telecommunications Training falls under three different categories, our training material has been packaged to suit each individual category.

References

Our Training Manuals are now used nationally by a number of TAFE Colleges and Private RTOs.

These manuals have undergone and completed trials within the TAFE environment and have been part of the TAFE Moderation process in WA and SA for the last four years

They are also the standard manual used nationally by JB Hunter Technology for Telecommunications Training.

Below is a part list of colleges and lecturers that utilise the resource material listed in this document.
